DESIGNING THE GAME: BRIEF

The means of the project

BRIEF

The DiDe (District of Design) association requested come proposals for the redevelopment of the **Sestiere del Molo district**, an area of the city of Genoa characterized by narrow alleys and traditional shops. The theme to be followed was "Genoa, European Capital of Sport 2024," meaning the project had to incorporate elements of movement and physical activity.

CONTEXT

As mentioned earlier, the project is applied to **the city of Genoa**, so it was necessary first to analyze the city from an urban planning and livability perspective. Genoa has a large historic center, a major attraction for tourists, but it is often not adequately renovated or maintained, with many areas in a state of decay (narrow and dirty alleys, abandoned scaffolding, poor lighting, and confusion due to its **maze-like layout**)

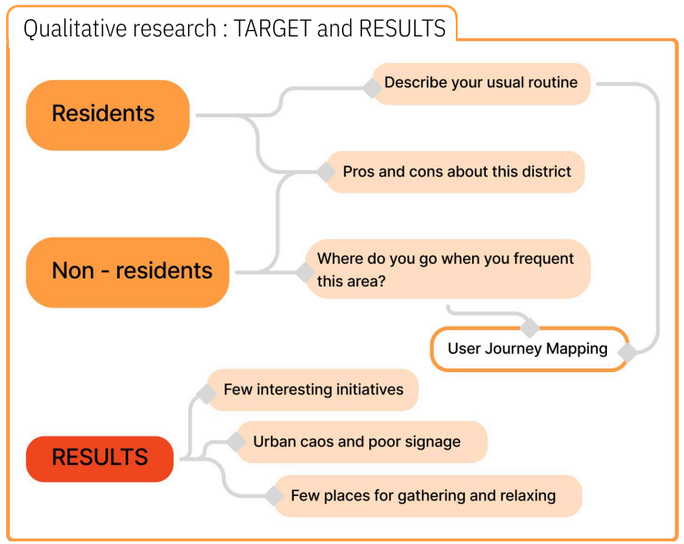

OUR SOLUTION

After an on-site analysis, brainstorming, and qualitative research, the proposal was developed for a game activity based on **the sport of orienteering**—a competitive sport that involves finding a series of control points along a mapped route, in the fastest way possible. This creates the perfect game to take advantage of the unique urban layout of this area of the city.

DESIGNING THE GAME: RULES

The research and how it works

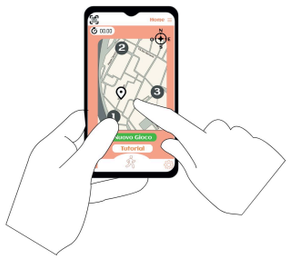

THE METHOD FOR THE RESEARCH

After analyzing the area of interest (the Molo district), several **brainstorming sessions** were conducted with the entire class, and each group then decided on its own strategy. The approach involved first **identifying the different types of citizens who experience the city** (divided by age groups) and then formulating targeted questions. We wanted to learn from the citizens about their **preferred leisure activities, the positive and negative aspects of the neighborhood, and their personal suggestions for improving unpleasant situations.**

1

Explore the map, check where all the checkpoints are (marked by numbers), and then start the game.

2

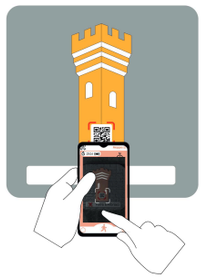

Follow the map and reach the first lantern/ checkpoint, marked as 1. You can check the timer in the top left corner.

3

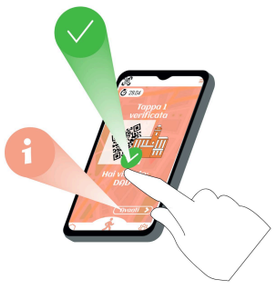

When you get close to the lantern's location, your phone will vibrate.

4

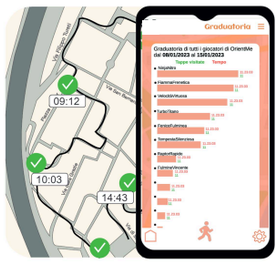

You will be prompted to turn on the camera through the app once you are in front of the lantern.

5

If the checkpoint is correct, it will be verified. You can then explore various fun facts about the location before continuing your search for the next lanterns.

6

Once you complete the route, you can check your total game time, see if you found all the checkpoints, and view your ranking.

NUDGE

You might even win a discount!

PROJECT IDEATION

Based on the research results , the idea of an orienteering-inspired activity was confirmed, but **adapted to the urban fabric of the district**. The goal is to create a game suitable for all ages, featuring an iconography inspired by the location, that is not overly invasive (due to the lack of space), and that can be accessed independently at any time of the day.

GAME'S RULES

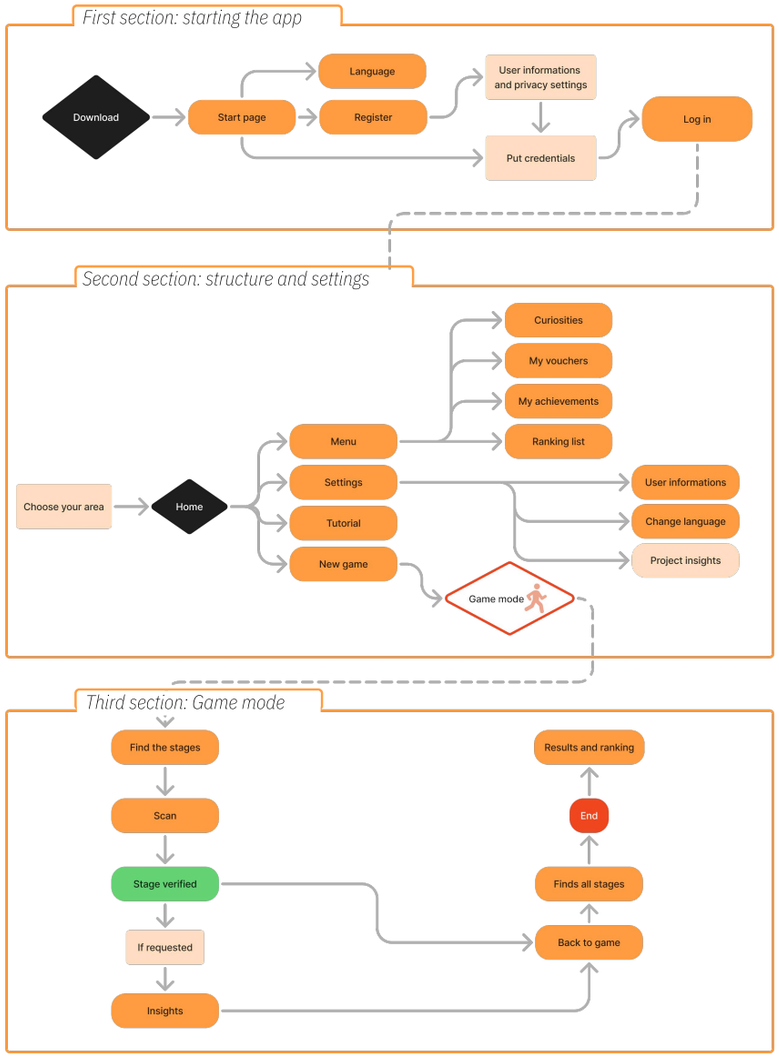

Above is a tutorial explaining the activity's instructions. There is **no single starting point**, as the primary goal is to f**ind and scan each checkpoint** in the order indicated on the map in the shortest possible time. After each scan, the interface will display the elapsed time and provide some information about the location (at which point the timer temporarily pauses).

DESIGNING THE GAME: THE APP

The graphics and the user flow

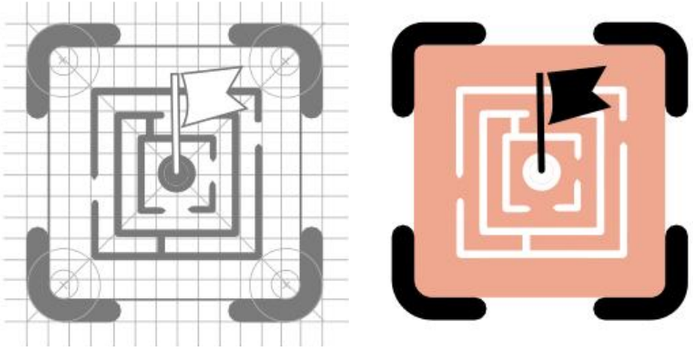

USER FLOW

The OrientME application has been designed to guide users in discovering the various scenic and cultural points of the neighborhood through a series of 12 strategically placed checkpoints. The app is divided into three main sections:

1. First section: **Starting the app** (entering personal data and privacy settings, such as GPS)
2. Second section: **Structure and settings**
3. Third section: **Game mode** (starting a new game, scores, and leaderboard)

OrientME : Aclonica Regular

Chosen font for the logo and some titles: Selected for its slightly medieval and antique style, reflecting the historical character of the neighborhood.

#FFFFFF #EFA78F #000000

#AF7171 #90C797 #DF9C3B #F5BEB4 #F4DB61

THE GRAPHICS

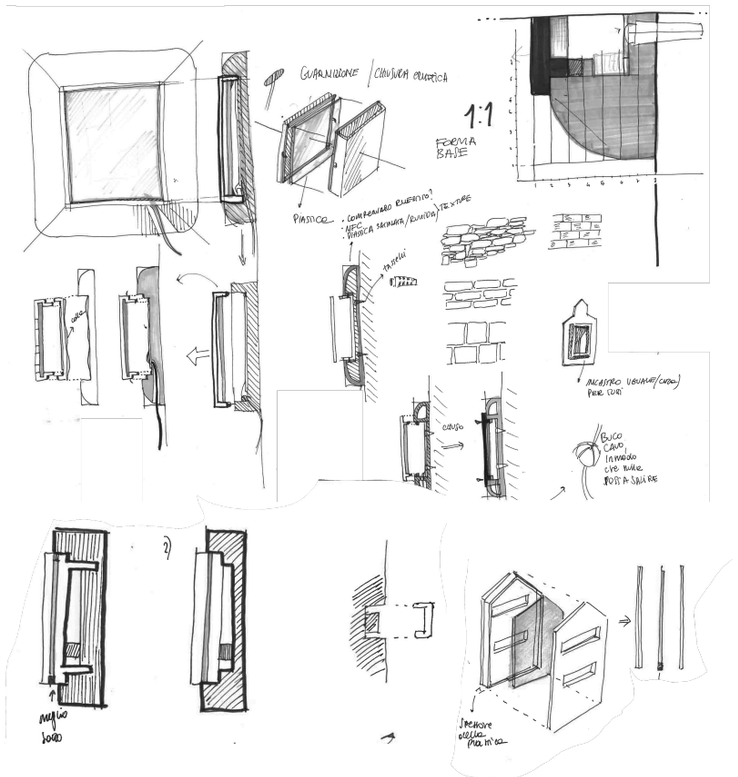

For the project's design, three primary colors were chosen: white, black, and light orange. The **light orange is widely present in the neighborhood** (on buildings and pavement) and was selected to create a sense of continuity. Additionally, five secondary colors were chosen—also found in the area, though less frequently. These colors appear on the facades of certain churches, some historic buildings, and decorative elements. They will also be featured on the lanterns used as control points.

DESIGNING THE GAME: THE CONTROL POINTS

Designing and building

Univercity of architecture

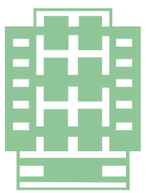

Saint' andrea square

Saint' Agustine Church

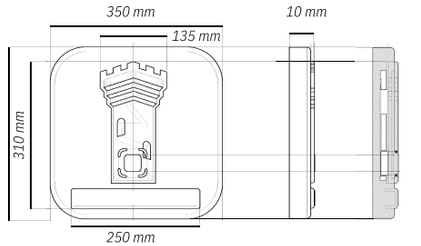

Saint' Bernard steet

Saint' George Church

Saint' donato tower

CREATING THE CONTROL POINTS

The lanterns were designed while maintaining some key parameters:

- **Reflect the architectural style of the area**
- **Clearly and quickly indicate the need to scan them**
- **Allow for fast assembly and removal**
- **Ensure illumination at night (twilight sensor)**

The final product consists of two parts:

1. The casing (the twilight sensor, batteries, light source, and wall anchors)
2. The detachable lantern, which includes a perforated wooden section, a transparent panel, **a removable QR code**, and a waterproof sheath

ICONS AND INSPIRATIONS

The shape of the control points was inspired by the **architecture and iconography of the neighborhood**. These icons, painted in the project's secondary colors, will be crafted in wood, repainted, and attached to the support casing. They feature solid and hollow areas, with the hollow sections indicating where the light will be visible.

TECHNICAL SPECIFICATIONS

- **Lighting:** LED Strip 5050, power 3-4 Watts, luminous flux 200 lm, 4000K
- **Power Supply**: 3 rechargeable AAA batteries
- **Twilight Timer:** On for 6 hours per day, BTC technology
- **Materials: Casing**: LLDPE polyethylene , **Sealing Gasket:** TPE-SEBS thermoplastic elastomer, **Lantern:** Okoume plywood, **Internal Panel:** Frosted polypropylene, **Mounting Anchors**
- **Wood Processing:** Laser cutting
- **Painting:** LUXENS exterior wood paint in a vibrant color
