SECONDARY PROJECT

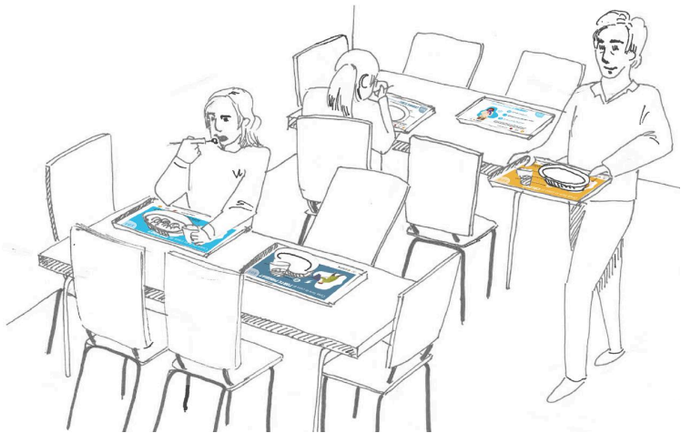

A new communication method in the soup kitchen

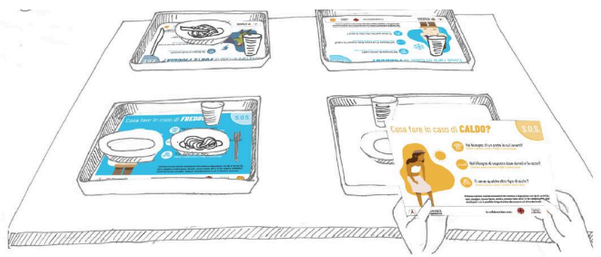

BRIEF AND DEBRIEF

A communication campaign is requested for the prevention and information of citizens regarding the civil protection services of Genoa, an integrated system of institutional bodies, structures, and operational teams that act in coordination at the national, regional, provincial, and municipal levels, carrying out essential functions of forecasting, prevention, and rescue.
The focus of the research centers on a very specific fact:

- Almost a quarter of the population, 24.3%, is at risk of poverty and social exclusion.

THE IDEA

The chosen contexts for communication/prevention are the soup kitchen of Genoa, places increasingly frequented by a wide variety of people. The perfect medium seemed to be the **placemats** on which food is placed, which can be read during the meal and perhaps even kept to revisit the contacts later. The message is: **How to cope with hot/cold stations/extreme events if you don't have a home/live alone/are in a difficult situation?** The viewer should feel supported and have the necessary information and means to face the various problems brought by the cold seasons. Even those who have a fixed home but cannot ensure a warm environment or meals will find these pieces of information useful.

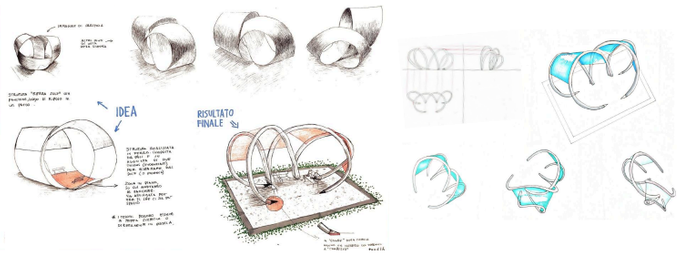

HOW IT WORKS

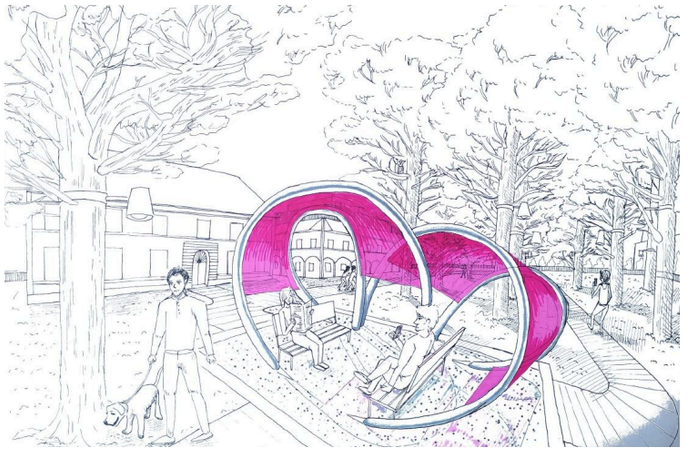

It was decided to include more direct information within the placemats (Do you need warm clothes?) along with instructions on which organization to contact or where to go.
Based on where the placemats are distributed, the phone numbers and organizations closest to the soup kitchen are included, so that it's not too inconvenient for the person to reach them (they might already be familiar with these organizations, making it easier).

HIGH SCHOOL PROJECTS

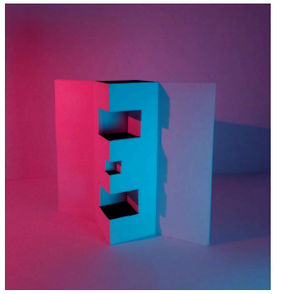

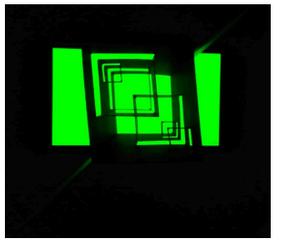

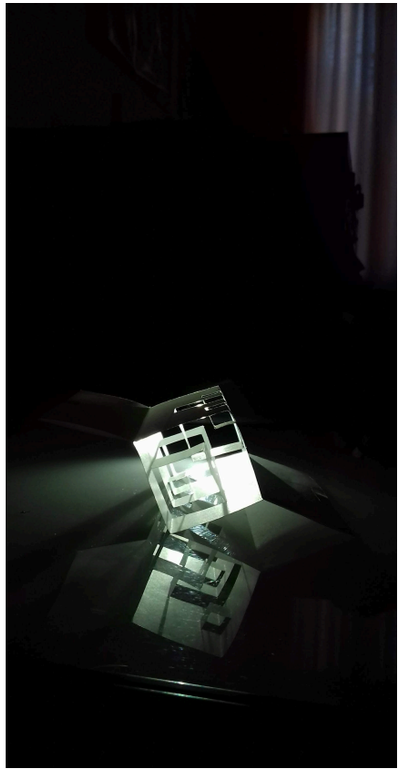

FROM SHAPE TO PRODUCT IDEA

The brief for this project was to create casual shapes starting from a paper strip joined at its ends. The chosen shape resembled that of an outdoor canopy, and from the initial idea, axonometric views and an environmental setting were developed, illustrating how I imagined this structure in a real-life context.

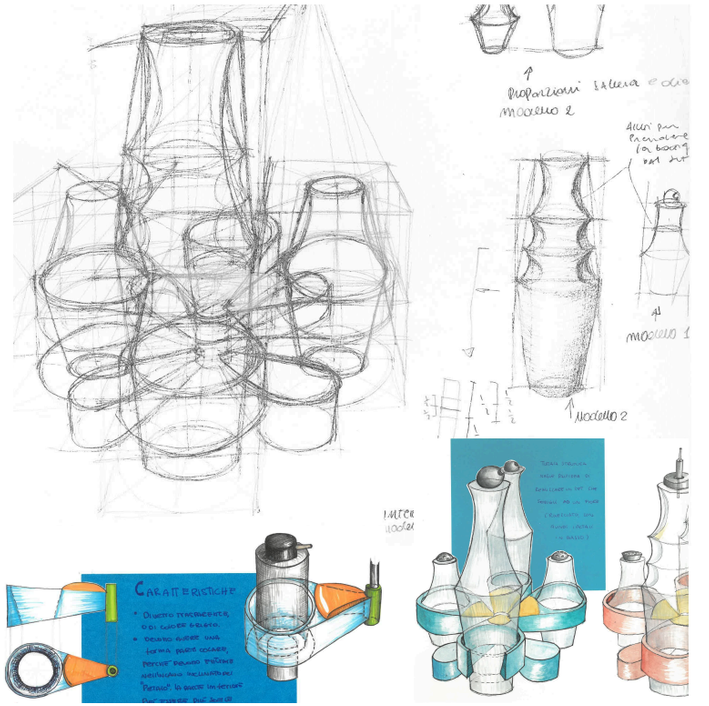

EXPERIMENTING LIGHT WITH KIRIGAMI

The brief required designing a new kirigami (an oriental technique involving cutting and folding). The chosen shape is a set of inward folds that create a very unique visual effect. Several photographs were taken to play with light effects, followed by various drawings.

DESIGNING A SALT AND PEPPER SHAKER

The project brief started with a composition of parallelepipeds, and the task was to design a salt and pepper shaker based on those shapes.
I decided to take inspiration from the shape of a flower (with the petals at the bottom acting as containers and the stem as the gripping element). It was also necessary to design appropriate bottles.
